McMillan's Message

Commissioner
John McMillan

Feeding the World: Alabama's Opportunity

The world's population will grow to 9 billion, while the world's middle class will triple in size to 3 billion people by 2050. As a result, world demand for food will double.

In late November, 2011, over 100 Alabamians from business, agriculture and government met in Birmingham to learn what significance these numbers have to Alabama, especially our farmers and agribusinesses.

Entitled, "Feeding the World," it was the first symposium of its kind to address strategic considerations and how Alabama agriculture must position itself for the long term.

One point reiterated by several of the presenters was the disconnect between consumers and the realization of what farmers must do to meet the explosion in demand for food and fiber. Tyson Foods' CEO Donnie Smith said the challenge is to give consumers, especially the up and coming generation, an understanding of how food is produced and why.

"We have to teach them what we know, and we have to do it in a hurry," Smith said. "We have a massive responsibility on our shoulders. We have to tell our story."

Alabamians find themselves in an enviable position of having the natural resources of good soil and abundant water, along with transportation linking up to the deep water Port of Mobile, all of which are necessary in meeting world food demand.

As Tyson's Smith said, the average consumer hasn't any idea how vegetables are grown or how meat is grown, processed and delivered. Having an understanding will pave the way for public policies that enable agriculture to thrive.

As Congresswoman Martha Roby told us that day, "We can't feed the world if the federal government is in competition

(continued on page 6)

STUDENTS ENJOY ALABAMA GROWN SATSUMAS

Students at Forest Avenue Academic Magnet Elementary School recently enjoyed delicious and nutritious Alabama grown satsumas. The Alabama Department of Agriculture and Industries' Farm to School Program strives to incorporate fresh Alabama grown fruits and vegetables into the school lunch program each year.

Commissioner of Agriculture and Industries John McMillan was joined at Forest Avenue by Perry Fulton, director of child nutrition programs of the Alabama State Department of Education (ALSDE), Frank Speed, administrator of food distribution at ALSDE, and Blake Nicholas, a Grand Bay area farmer who grew the satsumas. As a result of the Farm to School Program, every public school cafeteria across Alabama served Alabama grown satsumas in mid-December.

"The program just makes sense," McMillan said. "Children need to eat more fresh fruit and vegetables as a part of a healthy lifestyle and Alabama farmers can provide them." He added, "We appreciate the working relationship our department has established with the Alabama State Department

Maia McKinney, a student at Forest Avenue Academic Magnet Elementary School sits down to eat her Alabama grown satsuma with Agricultural Commissioner John McMillan looking on.

of Education and hope that next year we are able to put more Alabama grown foods on the lunch trays of our school children."

Fulton explained, "The Child Nutrition Program emphasizes fresh, locally grown fruits and vegetables. This year alone, \$2 million will be spent on fresh fruits and vegetables with \$600,000 of that going to Alabama farmers. We see this as a win-win situation—we are able to support Alabama farmers and expose students to locally grown seasonal produce."

The students were very excited to meet the farmer that grew the food on their plates. Nicholas spent time

explaining to students where his farm was located and how he grows the tasty satsumas.

"It is a privilege for me to be here and see these children enjoy the 'fruits' of our labor. It is encouraging as a farmer to see so many empty peelings on their plates," Nicholas said. "We are honored to have the opportunity to provide every Alabama school student this healthy treat."

Satsuma oranges are a small, sweet, nearly seedless citrus fruit that is very easy to peel because of its very thin, loose skin. Satsumas provide a wide range of vitamins and nutrients, such

SIX ALABAMA COUNTIES DESIGNATED AS PRIMARY NATURAL DISASTER AREA

In early December, U.S. Secretary of Agriculture Tom Vilsack designated six Alabama counties as disaster areas due to losses caused by excessive rain, flooding, flash flooding, hail, high winds and tornadoes that occurred April 1-30, 2011. Those counties are: Blount, Lawrence, Madison, Marion, Monroe and Morgan.

As a result of the designation, 20 Alabama counties were named as contiguous counties. Those counties are: Baldwin, Butler, Clarke, Colbert, St. Clair, Conecuh, Cullman, Escambia, Etowah, Walker, Fayette, Franklin, Jackson, Jefferson, Wilcox, Lamar, Lauderdale, Limestone,

Marshall and Winston.

This designation makes all qualified farm operators in the designated areas eligible for low interest emergency loans and disaster assistance under USDA Farm Service Agency's Supplement Revenue Assistance Program (SURE), provided eligibility requirements are met under each individual program, as applicable. The SURE was approved as part of the Food, Conservation and Energy Act of 2008 available to assist farmers and ranchers in the designated areas. Producers are reminded that USDA's authority to operate SURE expired on Sept. 30, 2011; however, production losses

in the counties listed above are covered because the event triggering the loss occurred prior to the expiration of these programs. Interested farmers should contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs.

Additional information is available online at <http://disaster.fsa.usda.gov>.

USDA is an equal opportunity provider, employer and lender. To file a complaint of discrimination, write to USDA, Assistant Secretary for Civil Rights, Office of the Assistant Secretary for Civil Rights, 1400 Independence Ave. S.W., Stop 9410, Washington, DC

ALABAMA CONGRESSIONAL DELEGATION BACKS BILL TO LIMIT EPA DUST REGULATIONS

By Mitt Walker
Alabama Farmers Federation

U.S. Reps. Spencer Bachus and Mike Rogers (R-Ala.) were among more than 100 co-sponsors of legislation that would limit the Environmental Protection Agency (EPA) from regulating naturally occurring dust. The bill passed the House of Representatives in December by a margin of 268-150. All seven of Alabama's congressional

delegation supported the bill.

U.S. Reps. Kristi Noem (R-S.D.) and Robert Hurt sponsored the Farm Dust Regulation Prevention Act, H.R. 1633. If it becomes law, the bill would limit EPA from regulating naturally occurring dust from rural areas to those areas where it is not regulated under state, tribal or local law, where the nuisance dust causes substantial adverse effects and the benefits of federal regulation outweigh the

costs.

Coarse particulate matter is a naturally occurring substance found mostly in rural areas. It is frequently caused by activities on unpaved roads and in farm fields. Virtually all of the data on possible environmental effects of coarse particulate matter comes from urban studies. EPA is reviewing the ambient air quality standard for coarse particulate matter in the normal course of a five-year review required by the Clean Air Act.

EPA Administrator Lisa Jackson recently announced that the agency would not propose any revisions to the current standard, a course that is supported by the Alabama Farmers Federation. This legislation, however, is still necessary in order to provide certainty to farmers, ranchers and rural residents that naturally occurring dust will not be federally regulated. Regulations often change from the proposal stage to the final rule and combined with the threat of citizen lawsuits, the current situation provides no certainty.

An identical bill was introduced in the Senate by U.S. Sen. Mike Johanns (R-Neb.) and is awaiting action in the Committee on Environment and Public Works.

Mama's Recipes

At this time of year, you have eaten all of the family favorites. Turkey, ham, dressing, casseroles of everything imaginable all converge into holiday feasts. So, when I started looking for a recipe to highlight for this month's column, I decided to go with a non-traditional dish—one that probably doesn't grace many holiday tables, but maybe it should. I hope you enjoy it.

As always, we invite you to share with us some of those tasty treats that your family is known for. So dig into the family cookbook, and send in your recipes to Alabama Farmers & Consumers Bulletin, Attn: Mama's Recipes, P.O. Box 3336, Montgomery, AL 36109-0336, fax to 334-240-7169 or email it to afcb@agi.alabama.gov.

Curried Chicken Salad

2 cup diced, cooked chicken
 ¼ cup sliced water chestnuts
 ½ lb. green grapes, cut in half
 ½ cup coarsely chopped celery
 ½ cup toasted slivered almonds
 8 oz. can pineapple chunks, drained

Dressing:

¾ cup mayonnaise
 1 teaspoon curry powder
 2 teaspoons soy sauce
 2 teaspoons lemon juice

In a bowl, mix all salad ingredients. Combine dressing ingredients and add to chicken mixture. Chill 3 to 4 hours (may be made one day ahead). Serve on Bibb lettuce or in a pineapple boat (cut a fresh pineapple in half lengthwise and scoop out a place for salad). Excellent garnished with cantaloupe and honeydew melon slices. Serves 6-8.

Satsumas in Schools

CONTINUED...

as vitamin C and cancer-fighting antioxidants.

Satsumas were introduced to Alabama in 1878, when trees were imported from Asia. The plants were very successful, but a string of fruit-killing freezes in the late 1920s and early 1930s took a toll on the industry.

Alabama Agricultural Extension System researchers currently are studying how to make Satsuma plants hardier in freezing temperatures and to reestablish their production in South Alabama.

Earlier this year, the Farm to School Program arranged for Alabama grown sweet potatoes and watermelons

Enjoying satsumas are kindergarten students (left to right) Maia McKinney, Carter Lehman, Elizabeth Belcher, Khalid Jackson and Nathan Hong. Looking on are Commissioner of Agriculture and Industries John McMillan, Alabama satsuma grower Blake Nicholas, Alabama State Department of Education (ALSDE) Director of Child Nutrition Programs Perry Fulton and ALSDE Administrator of Food Distribution Frank Speed.

to be served to all public school students. Plans are to continue to increase the amount of Alabama grown produce sold to schools through this program.

UPCOMING AG EVENTS

• **January 7, 14, 21, 28**—Clay County Goat and Poultry Auction, sale starts at noon at 748 Co Rd. 91, Goodwater. Horse sale will be held on Jan. 7. For more information, call 256-839-6824.

• **January 9-February 27**—First lessons in beekeeping class will be held at the library in Foley from 6 p.m. to 8 p.m. Tuition for the class is \$36 and \$12 for books. For more information, contact Roger Bemis at P.O. Box 353, Bon Secour, AL 36511, 251-213-0168 or email bemisroger@yahoo.com.

• **January 18-21**—The Practical Tools and Solutions for Sustaining Family Farms Conference will be held in Little Rock, Ark. The event offers pre-conference courses and field trips, eight tracks of practical sessions, a trade show, and more. The schedule is available at www.ssawg.org or email media@ssawg.org to request a brochure.

• **January 21-22**—The 18th annual Alabama Horse Fair will be held at Garrett Coliseum in Montgomery. Vendors from across the region will offer a diverse choice of goods and lectures on horse care and training will be presented. Clinics will feature RFD-TV stars Tommy Garland and Craig Cameron. Admission is \$10 per day with children 6 and under free. For more information, visit alabamahorsecouncil.org or call 205-678-2882.

• **January 28**—A special sheep and goat sale will be held at 1 p.m. at the North Alabama Livestock Auction on Hwy. 243 in Russellville. For more information, contact 256-332-3323.

• **February 24-25**—Bee queen workshop will begin at 9 a.m. both days at the Foley library. Please bring a bee suit and other protective gear. Tuition for the class for both days is \$50. Please make check payable to Roger Bemis and mail it to P.O. Box 353, Bon Secour, AL 36511 or call 251-213-0168 or email bemisroger@yahoo.com.

McMillan's Message

CONTINUED...

with farmers to take property out of production." That is why Roby, a member of the House Agriculture Committee, has authored legislation that will put more of our farmland back in production.

Fellow Alabama Congresswoman Terri Sewell, also an Agriculture Committee member, is co-sponsoring the bill entitled "The Preserving of Marginal Lands & Protecting Farming Act."

"At the end of the day, no matter how bleak it is when it comes to job creation and the economy, I think we all agree there is no country in the world that wouldn't trade places with the United States," Sewell said.

Dr. William Batchelor, dean of Auburn's College of Agriculture, noted that timing of the symposium was appropriate, given news reports that world population hit 7 billion in October. Despite vast improvements in agriculture production the past half century, he said American agriculture may well fall behind the demand curve.

Batchelor poignantly noted that we will succeed only if there are advances in biotechnology, expanded use of irrigation, and a more favorable government regulatory climate. Those are three big if's, all things considered.

HOW TO BUILD A FERAL HOG TRAP

By Chris Jaworowski
Wildlife Biologist

Alabama Division of
Wildlife and Freshwater
Fisheries

Landowners, farmers and wildlife managers in Alabama are looking for answers to the growing population of feral hogs in the state. Feral hogs are destroying crops and pastures and competing with native wildlife species for valuable food sources.

An important part of any feral hog control program involves live trapping. Feral hog traps come in all shapes and sizes; however, research has shown that corral traps have the ability to catch and hold more hogs than box-type traps.

The first step in building a corral hog trap is determining the type of door to use. Three types of designs are used: falling doors, swinging doors and root doors. Though all three designs will catch hogs, falling doors are considered single-catch traps. Swinging door and root door designs are considered multiple-catch doors because they allow more hogs to push their way into the trap even after the door has closed. Hog trap door designs are available via the Internet or can be purchased ready to install from many local farm stores and co-ops.

Constructing a feral hog corral trap is a task that can be completed by one or two people in about an hour. To build a corral trap large enough to catch 15 to 20 hogs, the following supplies are needed: three 5 ft. x 16 ft. horse panels, 14 6 ½-ft. T-posts, a T-post slammer, one roll of trapper's tie wire (utility wire) and one pair of lineman's pliers.

After building or purchasing a door, the next step is to find a suitable location for the trap. To keep hogs from rooting under the trap or bending your panels and escaping, you will need to find a flat and level area about 42 feet in diameter in the shade and near a water source.

Begin constructing the trap by setting the door facing a roadway, trail or fire lane that is accessible by vehicles. Traps accessible to trails or roads make removal of euthanized hogs much easier. Drive a T-post into the ground on each side of the door and tie the door to the T-post using the trapper's tie wire and the lineman's pliers.

Next, attach one of the three horse panels to the T-post supporting the door. Be sure to start at ground level and tie the panel to the post about every foot. After tying the wire to the post, use the lineman's pliers to twist the tie wire

tight. Next, move that panel and adjust to begin the formation of a circle. Install a T-post about 4 feet from the last post on the outside of the panel. Keep adding T-posts about every 4 feet until another horse panel is needed. When needed, overlap the next panel about 2 feet and tie both panels together with the tie wire. Be sure to install a T-post at the junction of the two overlapping panels. When the end of the second panel is reached, overlap the third panel and tie the panels together using the tie wire. Pull the panel around to the door and complete the circle by attaching the third panel to the T-post supporting the door. Remember to start at ground level when tying the panel to the post and install a tie about every foot. After tying the third panel to the door, complete the trap by installing T-posts every 4 feet along the third panel.

Trigger selection for the new trap depends on the door type used, but most often a trip wire made of 50- to 60-pound test fishing line and some type of root stick will be used.

For more information on trapping hogs, contact Chris Jaworowski at 154 Battlefield Rd, Lowndesboro, AL 36752 or contact your local Wildlife and Freshwater Fisheries district office.

A GRASSROOTS APPROACH TO LABOR SHORTAGE

By John McMillan

Time will tell whether a meeting of agribusinesses and community leaders in Mobile will yield measurable results to address a statewide shortage of labor in the \$5.5 billion agriculture industry.

Earlier in 2011, when Alabama's new immigration law went into effect, tens of thousands of Latino workers moved out of state, presumably to avoid arrest due to lack of proper documentation.

As a result, many farmers and agribusinesses, such as producers of poultry and catfish products as well as nursery growers, were left without a sufficient number of workers. Indeed, last summer and fall, we witnessed produce rotting in the fields throughout Alabama, again due to a lack of workers.

Responding to this emergency, we have launched a program of reaching out to the industry and to people in the local communities. Directing efforts in South Alabama is Bobby Cunningham, a community leader in Mobile who has helped us to launch our grassroots effort there.

About 200 people, including 150 from Mobile and Baldwin County agribusinesses, came to a December 6 public meeting to discuss alternatives to the chronic labor shortage. Thanks to U.S. Attorney Kenen Brown, of the Southern Alabama Federal District, for his insights. He has formed a program to help men and women to transition from prison to the work place, and came to our meeting to discuss how he can help.

Also there was Robert Brantley, head of the Alabama Employment Centers, under the state's Department of Industrial Relations. This department is working with farmers and agribusinesses to direct potential workers to job sites

John McMillan,
Agriculture Commissioner

around the state.

Discussing the ins and outs of the federal H-2A and H-2B guest worker laws was Rodolfo Alvarez, CEO of GWS Guest Worker Services LLC, who provides hundreds of workers from Mexico through this program. The U.S. Department of Labor has proposed significant changes in these two programs that may render them inoperable for the agriculture industry.

Thanks to other organizations, including ministers from Mobile and Prichard, who have reached out to people in their communities in search of ready, willing and able workers. They have identified no less than 1,000 men and women available for work.

Nursery growers, sod farmers and landscapers in South Alabama represent a large part of this state's billion-dollar nursery and landscape industry. Their labor needs hit a critical stage during the first quarter of 2012. Working with the South Alabama Nursery and Landscape Association, headed up by Debra Green, who is a nursery grower herself, we are cautiously optimistic that this is an approach that will yield results.

We will report back to you in the near future with results of our grassroots program in Mobile and Baldwin Counties, as well as elsewhere in Alabama.

PRODUCT SPOTLIGHT

Barber's Dairy was founded by George H. Barber in the 1930's. The dairy has a large ice plant, which produced enough ice to keep the pasteurized milk, buttermilk, butter, cottage cheese and other dairy products cold on company delivery trucks. Barber was one of this nation's outspoken advocates for pasteurization and distribution of milk products from centrally owned processing plants. His personal role in the establishment of the U.S. Public Health Service Grade A Pasteurized Milk Ordinance is widely recognized. This one ordinance changed forever the way milk is processed—ensuring a sanitary and safe milk supply for the country.

In the 1940's, Barber's Dairy purchased dozens of small independent dairies, marking its expansion as a regional dairy processor and distributor. Barber's ambitious growth continued as the company acquired other dairies in the 1950's and 60's. New manufacturing and operational headquarters came in the 70's, as well as full-service distribution centers across the Southeast.

Today, Barber's milk enjoys the brand equity of an 80-year-old name that delivers a 92 percent recognition rate in its home state of Alabama. As the oldest dairy in Alabama, Barber's Dairy has a respected history of delivering the best in dairy products in Alabama and parts of Mississippi, Georgia and Florida.

Barber's has a long-standing reputation for raising the benchmark in quality and innovation, from the introduction of wax-coating paperboard cartons in 1949 to the use of opaque white plastic jugs in the 1980's to keep out the light that destroys nutrient content and affects taste and freshness. Direct-store-delivery is another hallmark of Barber's that makes it possible to deliver on its everyday promise of "Freshness. Guaranteed!"

Barber's Dairy products include milk, buttermilk, sour cream, cottage cheese, party dip, orange juice, lemonade, party punch, half & half, whipping cream and eggnog. You can find these products at your local retailer. For more information on Barber's Dairy, please visit its website at www.BarbersDairy.com.

Recently, Commissioner John McMillan and several others visited George Warden's satsuma orchard in Grand Bay. Pictured are (l-r) Bobby Cunningham, George Warden, McMillan, satsuma farmer Joyce Nicholas, Valerie Day, field representative for Sen. Jeff Sessions and Frazier Payne, field representative for Rep. Jo Bonner.

USDA MEASURES ECONOMIC WELL-BEING OF AMERICAN FARMS

The U.S. Department of Agriculture's National Agricultural Statistics Service (NASS) will spend the next several months contacting farmers and ranchers across the nation to conduct the Agriculture Resource Management Survey (ARMS). The results of this survey will serve as a baseline for numerous federal policies and programs that affect U.S. farms and farm families.

"ARMS is our primary tool for gauging the financial condition and production practices on American farms and ranches," said Bill Weaver, director of the NASS Alabama Field Office. "By participating in this survey, Alabama farmers directly

impact the decisions that affect them, their families and their operations."

NASS and the USDA's Economic Research Service will reach out to nearly 35,000 producers nationwide, including 478 in Alabama between mid-January and the end of March. The survey asks the producers to provide data on their operating expenditures, production costs and household characteristics. Nearly half the sample in Alabama will target broiler operations this year as part of the cost of production study.

Weaver said, "Poultry producers are dealing with rising expenses in a flat

market; vegetable farmers have been impacted by the recent immigration legislation; and farmers in the southeastern part of the state experienced a drought that is still lingering today. That's why it is imperative for all farmers contacted by NASS to provide responses so people in the industry can make informed decisions to determine farm policy both today and tomorrow."

Information provided by respondents is confidential by law. The economic data gathered in ARMS will be published in the annual Farm Production Expenditures report on August 2, 2012. All NASS reports are available online at www.nass.usda.gov.

2012 ALABAMA FARM OF DISTINCTION

Apply Now To Win Over \$10,000 In Cash & Prizes

Deadline is Jan. 31

The Alabama Farm-City Committee is seeking applications for the Alabama's Farm of Distinction. Farms will be judged on environmental stewardship, overall appearance, accomplishments, efficiency and leadership of the farm owner. Based on the applications submitted, division winners will be chosen from four areas of the state, plus two at-large winners. These six farms will then compete for the state title and prizes valued at more than \$10,000. SunSouth, TriGreen and Sneed Ag Supply will donate a new John Deere Gator to the 2012 winner. In addition, the Alabama Farmers Cooperative (AFC) will present each division winner with a \$250 gift certificate and the state winner with a \$1,000 gift certificate redeemable at any of its Quality Co-op stores. The state winner also will receive a \$2,500 cash award from Swisher International of Jacksonville, Fla., and go on represent the state in the Southeastern Farmer of the Year competition at the Sunbelt Agricultural Expo in Moultrie, Ga., on Oct. 16-18. The winner will be announced April 2 at the Alabama Farm-City Awards in Birmingham. For more information, call 1-800-392-5705, ext. 4410 or email pculver@alfafarmers.org. Applications are available at www.AlfaFarmers.org/farm-city.
